

CHANDLER THOMAS

NETWORK COMMUNICATIONS ENGINEER | CISCO & JUNIPER | VOICE/DATA NETWORKS | NETWORK DESIGN

Daytona Beach, FL | Open to Travel & Relocation | 407-639-5300

PROFESSIONAL SUMMARY

Network professional with hands-on, daily experience configuring and troubleshooting Cisco and Juniper switching and routing in live multi-vendor commercial environments, supporting SIP-based voice services and Metaswitch voice platform infrastructure alongside data networking, plus prior experience supporting business voice and data connectivity solutions in the telecommunications sector. Skilled in IP network design fundamentals (TCP/IP, IPv4, subnetting, VLANs, DHCP, DNS, ARP, routing), network monitoring and performance troubleshooting with SolarWinds, and coordinating network implementations, cutovers, and change activities with cross-functional and customer-facing teams. Builds structured network documentation, topology diagrams, and standard operating procedures to support operational continuity. Currently pursuing Juniper JNCIA and Cisco CCNA certifications, with a Master's in Information Technology Management concentrated in Information Assurance & Cybersecurity. Comfortable translating technical network requirements for both technical and non-technical stakeholders, including customers and government or enterprise partners.

CORE NETWORK ENGINEERING SKILLS

Switching & Routing: Cisco Switches & Routers • Juniper Switches & Routers • Junos Configuration & Troubleshooting • Raisecom Access Equipment • Multi-Vendor Network Support

Network Design & Architecture: LAN/WAN Design & Implementation • Network Topology • VLAN Segmentation • Structured Documentation • Visio Diagramming • Capacity-Focused Monitoring

IP Networking: TCP/IP • IPv4 • Subnetting & IP Address Management • ARP • DHCP • DNS • Routing Principles • Layer 1–2 Troubleshooting

Voice & Data Convergence: SIP • Metaswitch • Business Voice & Data Connectivity Solutions • Customer Network Activations • Cutover & Change Coordination • Fiber-Based Networks (GPON/XGS-PON, ONT/OLT)

Monitoring & Operations: SolarWinds Network Monitoring • Incident & Ticket Management • Configuration Validation • Root-Cause Troubleshooting • Technical Documentation

Security & Compliance: Network Segmentation • Zero Trust Principles • NIST-Aligned Practices (graduate coursework) • Access Control Concepts

Tools & Development: Microsoft 365 • Teams • SharePoint • Excel • PowerApps • Python • Git • GitHub

PROFESSIONAL EXPERIENCE

Commercial Network Technician | *Summit Broadband, Orlando, FL*

2024 – Present

- Work daily with Juniper switches alongside Cisco switching and Raisecom access equipment, applying hands-on Junos configuration and multi-vendor networking concepts to design, validate, and troubleshoot commercial network infrastructure.
- Support and troubleshoot SIP-based voice services and Metaswitch voice platform infrastructure as part of daily converged voice and data network operations.
- Provide hands-on technical support for commercial network infrastructure, partnering directly with the Network Operations Center to troubleshoot customer connectivity and service-impacting issues across multiple sites.
- Troubleshoot Layer 1 and Layer 2 network problems across switches, routers, NIDs, CPE, ONTs, cable modems, and related infrastructure.
- Configure and troubleshoot IP connectivity using TCP/IP fundamentals, IPv4, subnetting, VLAN concepts, ARP, DHCP, DNS, and routing principles.
- Support IP addressing projects involving new IP assignments and subnet changes for commercial subscribers while validating connectivity and minimizing customer impact.
- Use SolarWinds and other monitoring tools to identify network conditions, analyze performance, investigate alarms, isolate faults, and coordinate resolution with Network Operations.
- Assist with network implementation and project activities by validating configurations, coordinating technical requirements, and supporting deployment and cutover activities.
- Maintain accurate ticket records, technical notes, configuration information, and customer-impact documentation to support troubleshooting and future engineering work.

- Collaborate with Network Operations, field technicians, and other technical teams to resolve customer network issues and complete network-related projects, communicating technical requirements clearly to technical and non-technical stakeholders.
- Support broadband access environments involving GPON and XGS-PON technologies, ONTs, OLT infrastructure, and optical network architecture.

Technology / Customer Support | *Asurion*

2023 – 2024

- Diagnosed and resolved hardware, software, and connectivity issues in a high-volume technical support environment using structured troubleshooting methodologies and clear customer communication.

Account Executive, Telecommunications | *Windstream*

2021 – 2023

- Supported business customers with converged voice and data connectivity solutions, translating technical requirements into practical implementation steps and coordinating delivery with internal technical teams.

Mobile Expert | *Best Buy*

2019 – 2021

- Provided technical support and troubleshooting for wireless devices, connectivity, and consumer technology, explaining solutions in clear, accessible language.

SELECTED NETWORK ENGINEERING PROJECTS

Enterprise Network Infrastructure Lab — VLANs, Routing, Fault Tolerance

- Designed an enterprise network topology incorporating VLAN segmentation, routing, switching, and fault-tolerant network concepts; developed diagrams documenting logical relationships between switches, routers, VLANs, and endpoints.
- Configured and validated network connectivity while troubleshooting routing, VLAN, and Layer 2/Layer 3 communication issues and documenting implementation requirements and addressing plans.

Network Monitoring & Alerting Lab — Monitoring, Troubleshooting, Operations

- Built a network monitoring environment focused on identifying connectivity issues, infrastructure availability, and service-impacting events; developed troubleshooting workflows and playbooks.

ARP / DHCP / DNS Networking Lab — TCP/IP, DHCP, DNS, ARP

- Created a practical networking lab demonstrating ARP behavior, DHCP address assignment, DNS resolution, and TCP/IP communication, troubleshooting failures using a structured Layer 1–Layer 3 methodology.

Zero Trust Network Security Lab — Segmentation, Access Control

- Designed a segmented network environment demonstrating Zero Trust security principles, network segmentation, access controls, and least-privilege concepts.

EDUCATION

Trident University International — M.S. in Information Technology Management

Concentration: Information Assurance & Cybersecurity | Expected December 2026

Seminole State College — B.S. in Information Systems Technology

Concentration: Programming

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

Juniper Networking / JNCIA — Professional Development • Cisco CCNA — In Progress • VMware — Professional Development • Network Infrastructure & Wireless Networking — Ongoing Development

TECHNICAL TOOLS & TECHNOLOGIES

Networking: Cisco • Juniper • Junos • Raisecom • SIP • Metaswitch • TCP/IP • IPv4 • Subnetting • VLANs • Switching • Routing • ARP • DHCP • DNS • PON • GPON • XGS-PON • ONT • OLT • CPE • NID • Cable Modems

Monitoring & Operations: SolarWinds • Network Monitoring • Ticket Management • Incident Troubleshooting • Configuration Validation • Technical Documentation

Engineering & Productivity: Microsoft Visio • Excel • Teams • SharePoint • Microsoft 365 • PowerApps

Programming & Databases: Python • Java • SQL • MySQL • Git • GitHub
